**Our Theme: Towards Net Zero with Clean Energy Technologies in Africa**

**With a focus on:**

- Cooking
- Transport
- Power Generation
- Diversity

Countries globally have committed to the 17 UN Sustainable Development Goals (SDGs) which are an urgent call for action by all countries in a global partnership. They recognise that ending poverty and other deprivations must go hand in hand with strategies that improve health and education, reduce inequality, and spur economic growth – all while tackling climate change and working to preserve our oceans and forests.

Businesses must continually adopt and/or integrate renewable energy and clean energy technologies as sustainable solutions to climate change.

This Africa LPG Summit, presented by the PIEA and WLPGA, provides an opportunity for the cooking, transport and power generation sectors to share knowledge and expertise through the adoption of clean energy technologies.

The focus will be on Africa's shift towards clean energy as the Continent transitions towards a net-zero future and secondly on the role that LPG, in support of the SDGs, is playing to achieve this target.
